Vaibhav Sutar

Software Engineer | Java, C++ | Backend & Distributed Systems
Sangli, Maharashtra — +91-7499518568 — sutar.vaibhav649@gmail.com
GitHub — LinkedIn

Education

KIT's College of Engineering, Kolhapur
B.Tech in Computer Science and Engineering. Nov 2022 – Jul 2026 **CGPA: 8.45**
Relevant Coursework: Data Structures, Algorithms, Operating Systems, DBMS, Computer Networks, Object-Oriented Programming

Professional Summary

Computer Science graduate with hands-on experience developing backend applications using Java, Spring Boot, Node.js, and REST APIs. Strong foundation in Java, C++, Python, JavaScript, Data Structures and Algorithms, Object-Oriented Programming, and DBMS. Experienced in building database-driven applications and scalable backend services using PostgreSQL, MySQL, MongoDB, Redis, Git, and Docker through internship and academic projects.

Technical Skills

Languages: Java, JavaScript, C++, C, Python
Programming & CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Frontend: React
Backend: Node.js, Express.js, Spring Boot, FastAPI, REST APIs
Databases: MongoDB, MySQL, PostgreSQL, Redis
AI/ML Applications: RAG, Vector Search, Semantic Search, AI-powered Applications
Tools: Git, GitHub, Docker, Linux, Postman, Maven

Experience

Infotact Solutions – Web Developer Intern Jan 2026 – Mar 2026

- Developed scalable backend services using **Node.js, Express.js, MongoDB, Redis, and Docker**.
- Designed and implemented **RESTful APIs**, JWT-based authentication, and asynchronous background processing using BullMQ.
- Designed **normalized database schemas** and optimized backend workflows for scalability and performance.
- Collaborated with frontend developers to integrate APIs and followed **Git-based Agile development workflows**.

Projects

OpsMind AI — RAG-Based Enterprise Knowledge Assistant

- Developed a **RAG-based enterprise knowledge assistant** using Node.js, MongoDB Vector Search, and Redis.
- Designed asynchronous document ingestion and **semantic indexing pipelines** for efficient knowledge retrieval.
- Built REST APIs for document ingestion, retrieval, semantic search, and AI-powered responses.
- Implemented backend workflows integrating application services with vector search infrastructure.

ProspectMiner AI

- Designed and developed an AI-powered lead generation platform using **Node.js, Express.js, MongoDB, Redis, and BullMQ**.
- Built **REST APIs, authentication modules, analytics dashboards, and CSV export functionality**.
- Engineered asynchronous worker pipelines for scalable background processing and long-running jobs.

GradX AI

- Developed RESTful backend services using **Java and Spring Boot** for academic document processing.
- Designed a **PostgreSQL relational database schema** for structured document storage and retrieval.
- Implemented backend APIs for processing and managing academic document data.
- Integrated Spring Boot services with Python/FastAPI microservices for scalable document processing.
